SUMMARY

Full-Stack Developer with expertise in Java, ReactJS, NextJS, Spring Boot, and Microservices architecture. Skilled in RESTful API development, database optimization, and scalable backend systems. Experienced in Docker, Git, and cloud-ready deployments. Practical expertise in system design, performance optimization, and robust application development with demonstrated success in delivering production-ready, reliable enterprise solutions in Agile/Scrum environments.

EDUCATION

- B.Tech (CSE) from Technocrats Institute of Technology & Science, Bhopal (MP) | CGPA 8.34 | 2021-25
 - 12th (CBSE Board) from DAV Public Sr. Sec. School Bina, Sonbhadra (UP) | 2020 | 84.6%
 - 10th (CBSE Board) from DAV Public Sr. Sec. School Bina, Sonbhadra (UP) | 2018 | 91%
-

SKILLS SUMMARY

- **Programming & Databases:** Java, Python, Data Structures & Algorithms, MySQL, PostgreSQL
 - **Web Technologies:** HTML, CSS, JavaScript (ES6+), Responsive Design, ReactJS, NextJS, Redux
 - **Architecture & Frameworks:** Spring Boot, Hibernate, Microservices
 - **APIs & Integrations:** RESTful APIs, API Testing, Postman, Swagger
 - **DevOps & Tools:** Docker, Jupyter Notebook, Visual Studio Code, IntelliJ IDEA, Git/GitHub
 - **Core Competencies:** Leadership, Decision-Making, Learning Agility, Performance Efficiency
-

EXPERIENCE

Python Developer Intern — Timoz Digital Era Pvt Ltd, Bangalore **Oct 2024 – Dec 2024**

- Developed a real-time Back Cover Visualization feature using Django, enabling 10,000+ users to preview custom designs across 50+ mobile phone models.
 - Engineered a sophisticated image processing pipeline (Python, OpenCV, NumPy) with affine transformation, masking, and alpha blending, achieving 95% rendering accuracy.
 - Established automated testing and code review pipelines, reducing production bugs by 90%.
-

PROJECTS

Phone-less Biometric UPI Payment System | (Spring Boot, Java 11, MySQL, Microservices Razorpay API) | (In Progress)

- Building a **biometric-based UPI payment system** that enables completely **phone-less transactions**, allowing users to pay using only fingerprint authentication at a terminal.
 - Implementing the **UPI AutoPay mandate flow**, where the user approves the mandate once with UPI PIN, after which all future payments are auto-authorized securely via biometrics.
 - Creating a biometric attestation mechanism that generates short-lived secure tokens, enabling **instant payments** without requiring phone, OTP, PIN, or card during each transaction.
-

Secure Share with Face Guard Encryption | (Python, OpenCV, Django REST Framework, MySQL, AES-256, JWT) | [GitHub](#) | [Live Demo](#) — Aug 2025 – Oct 2025

- Built a file-sharing platform integrating AES-256 encryption with facial recognition authentication.
- Integrated computer vision and deep learning models, achieving 97% biometric accuracy and reducing unauthorized access attempts by 90%.
- Implemented a protected file repository with advanced key handling, blocking 95% of potential threats.
